

Sprint Planning

Know the end from the beginning

- When the sprint ends:
Thursday April 9th
- How many hours you have to work on this project this sprint
15-20 hrs each
- Who is going to be here on what days (vacation / other class priorities)
Everyone will be on discord throughout this whole time period. ***Since if you leave your home you are a bad person for contaminating others.***
- Pick a metric to evaluate each other on during the retrospective
Percentage of assigned tasks completed
- For sprints 2 & 3: List 1 item from your retrospective what you said you were going to do better at that you are going to focus on this sprint.
-Allocate more time for this class/project.
- Assign a ScrumMaster for this sprint
Sally Devitry
 - List all team members on this document (indicate who was not here)

Sally Devitry, Hunter Henrichsen, Jace Longhurst, Connor Geslin, Colton Hill

Fill out details for each story

1. Joining Auctions (Frontend, API)
 2. Auction Management (Frontend)
 3. **Front End Development**
 4. Bidding
 5. Full Database
- Make sure all previous stories in the “Done” column are archived in your GitHub project
 - Each story that you bring in has a description with:
 - Size estimate by the team
 - Small (< 1 day)
 - Medium (1 day)
 - Large (2 days)
 - Any larger than this should be broken down into smaller tasks
 - Description of what is in scope, what’s out of scope
 - This Sprint well will be doing primarily **frontend development**
 - Acceptance criteria in the description stating what it will look like when it’s done
 - Tasks that will be accomplished to complete the story

- These tasks can be created in the GitHub project as notes (but then convert them to issues so that you can assign a person)
 - Assign a size estimate to each task (S, M, L)
- Stories and tasks should not be assigned to a specific person (unless carrying over from a previous sprint)

Artifacts

- Stories / tasks are created and on the sprint backlog
- Create a spreadsheet graph for burndown by totaling up the size estimates and setting that as your amount of work left to do. (commit and push to /docs/planning/SprintXBurndown.xlsx)
- Sprint planning document (with the top section information to /docs/planning/SprintX.docx)
 - Attach a screenshot of your Sprint Backlog after planning
